ClaimSync

Reseller Partner Guide

Your Portal, Your Facilities, Your Revenue

Prepared for: Saleem | By: Anbu, Kaaryaa GenAI Solutions

March 2026 | CONFIDENTIAL

Your Facilities	Files Synced	Pull Schedule	Revenue Share
2 Active	**437+**	**07:00 UAE**	**xx%**
MF2618 + MF5360	*100% cloud success*	*Reggr\ daily auto*	*Per facility you onboard*

1. What is ClaimSync — Your Partner Platform

ClaimSync is the cloud platform Kaaryaa built to automate your Shafafiya file download operations. Instead of running the local engine on your PC each morning, ClaimSync runs automatically in Microsoft Azure UAE North at 06:00 every day — for every facility under your account.

You remain the channel partner and operator. Your facilities, your clients, your revenue share. The difference is that the cloud handles the heavy lifting, and you get a web portal to monitor, manage, and control everything yourself — without calling Anbu.

Your Role	Reseller Partner — you onboard facilities, manage clients, earn xx% revenue share
Your Facilities	MF2618 (Mediclinic) + MF5360 — both live and syncing daily
Your Client Group	SALEEM-GROUP — both facilities under one billing group
Your Portal	saleem@claimsync.cloud / ClaimSync@Saleem2026
File Delivery	Reggr\ on your PC — auto-pulled daily at 07:00 UAE (same folder structure)
Engine Runs	06:00 UAE daily — Azure Container App Job (no PC required)

2. Local Engine vs ClaimSync Cloud — What Changed

Aspect	Local Engine (Before)	ClaimSync Cloud (Now)
Who runs it	You — manually each day or via Task Scheduler	Azure — automatically 06:00 UAE, no intervention
If your PC is off	Files not downloaded that day	No impact — cloud runs independently
File location	Same local folders	Same folders in Reggr\ — auto-pulled at 07:00 UAE
Monitoring	Check folders manually	Portal — run history, file count, status in real time

Aspect	Local Engine (Before)	ClaimSync Cloud (Now)
Issues	Call Anbu on WhatsApp	See the error in portal yourself + trigger re-run
New facility	Anbu configures manually	5-step onboarding wizard — you do it yourself
Audit trail	downloadlog .txt files locally	Portal + SOAP XML viewer + DB + blob logs
Scalability	One PC, manual effort per facility	Unlimited facilities — auto-scales

Key point: Your Reggr\ folders work exactly the same as before. Same file names, same structure, same search_history XMLs for your validation. The only difference is they arrive automatically — you don't need to run anything.

3. Your Reseller Portal — Full Walkthrough

3.1 Login

URL	https://ca-claimssync-dashboard.whitewater-45edc27c.uaenorth.azurecontainerapps.io/reseller/login
Email	saleem@claimsync.cloud
Password	ClaimSync@Saleem2026

3.2 Reseller Dashboard

First page after login. Shows:

- Recent sync activity — last 5 runs across ALL your facilities
- Facility summary — MF2618 and MF5360 status at a glance
- Quick links to facility detail and onboarding

3.3 Facility List — /reseller/facilities

Shows all your facilities grouped under SALEEM-GROUP. For each facility:

- Facility code + name + status
- Last run date and file count
- Adhoc Run button — trigger immediately
- View button — go to full facility detail

3.4 Facility Detail — /reseller/facilities/{id}

The most useful daily monitoring page. Shows:

Run History Table

- Last 10 sync runs — Started, From date, To date, Status, Files downloaded
- Status badge: Success (green) / Failed (red) / (adhoc) label for manual runs
- Auto-refreshes every 30 seconds

Files Tab (per run)

- Every file downloaded — filename, type (claims/remittance/resubmission), size, uploaded time
- Filter by filename — find a specific file instantly

- Export CSV — full file list for that run

Intervals Tab (per run)

- 24 intervals per full-day run — one row per 2-hour window
- Green row = files found in that window, grey = empty window
- FROM and TO times for each interval
- Request status + Response status (Ready = blob available)
- View button — opens side-by-side SOAP XML viewer

Side-by-Side SOAP XML Viewer

- Left panel: Request XML — what we sent to Shafafiya (login, date range, params)
- Right panel: Response XML — what Shafafiya returned (FileIDs, filenames, record counts)
- Use this to validate exactly what was available in any 2-hour window
- Same information as your local search_history_*.xml files — but in a browser

3.5 Adhoc Run — /reseller/facilities/{id}/adhoc-run

Trigger a manual sync for any date range — without calling Anbu. Use this to:

- Re-download files for a specific date if something was missed
- Download historical files for a date range (e.g. full week)
- Validate a new date range before the scheduled 06:00 cron

How to use:

1. Enter From date (e.g. 2026-03-15 00:00) and To date (e.g. 2026-03-15 23:59)
2. Click Run Now — run is triggered in Azure within seconds
3. Green banner confirms the run started
4. Wait 3-5 minutes — Run History auto-refreshes
5. Expand the new row — check Files and Intervals tabs

3.6 Onboarding New Facility — /reseller/onboard

When you have a new facility ready to onboard:

6. Go to /reseller/onboard
7. Step 0: Choose "Existing Client" (add to SALEEM-GROUP) OR "New Client" (standalone)
8. Fill facility details — code, name, contact email
9. Submit — Anbu reviews and approves
10. System sends a secure 7-day email link to the facility contact
11. Facility enters their Shafafiya credentials via the secure link
12. Facility goes live on the next 06:00 UAE cron — appears in your portal automatically

4. Your Files — Reggr\ Folder on Your PC

ClaimSyncPull.py runs every day at 07:00 UAE and downloads all new files from Azure Blob Storage to your PC. The folder structure is identical to what the local engine produced.

4.1 Folder Structure

C:\Users\USER\ClaimSync\Reggr	Base folder — all facilities
Reggr\claimsync_pull_YYYY-MM-DD.log	Central log — what was downloaded each day

Reggr\mf2618\claims	H* claim XML files for MF2618
Reggr\mf2618\remittance	RA_* remittance response files
Reggr\mf2618\resubmission	RSB* resubmission files (after attachment strip)
Reggr\mf2618\search_history_*.xml	Per-interval SOAP request + response XMLs (at root)
Reggr\mf2618\logs	downloadlog-MF2618-{ts}.log + .csv per run
Reggr\mf5360\ (identical structure)	All MF5360 files — same layout

4.2 Search History XML Files — Same as Before

The search_history_request_*.xml and search_history_response_*.xml files are now generated by the cloud engine and pulled to your PC daily — identical to what the local engine produced. You can continue using them for validation exactly as before.

File	Content	Use For
search_history_request_MF5360_claim_N.xml	SOAP request we sent to Shafafiya for interval N	Confirm what date range was queried
search_history_response_MF5360_claim_N.xml	Shafafiya response with FileIDs + filenames	Validate which files were available
search_history_request_MF5360_remit_N.xml	Remittance search request for interval N	Same — for remittance files
search_history_response_MF5360_remit_N.xml	Remittance response from Shafafiya	Validate RA_* file availability

4.3 Setup — CLAIMSSYNC_STORAGE_KEY

This is already configured on your PC. The storage key is set as a system environment variable. Task Scheduler runs ClaimSyncPull.py at 07:00 UAE daily automatically.

If you ever need to run it manually:

```
C:\Users\USER\AppData\Local\Microsoft\WindowsApps\python.exe ClaimSyncPull.py
```

5. Your Client Groups — How We Organised Your Facilities

We introduced a "Client" layer that sits between you (the reseller) and each facility. This means you can group multiple facilities from the same healthcare group under one client — or keep each facility standalone.

Client Group	Facilities Included	Plan	What It Means
SALEEM-GROUP	MF2618 + MF5360	Pro	Both facilities grouped — one billing entity
PF2576-CLIENT	PF2576	Starter	Standalone — its own separate client (inactive)
(New facility)	MF-XXXX (when onboarded)	TBD	You choose: add to SALEEM-GROUP or new client

When you onboard a new facility, the wizard asks: "Add to SALEEM-GROUP OR create a new standalone client?" You decide based on whether the new facility is part of an existing group or a completely new client relationship.

6. Your Portal — All URLs (Click to Open)

Login: saleem@claimsync.cloud / ClaimSync@Saleem2026

Page	URL (click to open)	What You Can Do
Your Login	.../dashboard/reseller/login	*Start here*
Dashboard	.../dashboard/reseller/dashboard	*Recent activity across all facilities*
Facility List	.../dashboard/reseller/facilities	*All your facilities grouped by client*
MF2618 Detail	.../dashboard/reseller/facilities/MF2618	*Run history + Files + Intervals for MF2618*
MF2618 Adhoc Run	.../dashboard/reseller/facilities/MF2618/adhoc-run	*Trigger manual run for MF2618*
MF5360 Detail	.../dashboard/reseller/facilities/MF5360	*Run history + Files + Intervals for MF5360*
MF5360 Adhoc Run	.../dashboard/reseller/facilities/MF5360/adhoc-run	*Trigger manual run for MF5360*
Onboard New Facility	.../dashboard/reseller/onboard	*5-step wizard — new or existing client*
Onboarding Status	.../dashboard/reseller/onboarding	*Track submitted requests*

7. Transition Plan — From Local Engine to Cloud

7.1 This Week

- ✅ ClaimSyncPull.py running daily at 07:00 UAE — files in Reggr\ automatically
- ✅ CLAIMSSYNC_STORAGE_KEY set as system env var — verified working
- ✅ Both MF2618 + MF5360 syncing via cloud engine at 06:00 UAE
- ✅ Your reseller portal live — runs, files, intervals, adhoc all working

7.2 Next Steps

- ☐ Onboard 1 new facility as POC — test full cloud onboarding end-to-end
- ☐ Use portal daily for a week — verify it matches your local engine output
- ☐ Share reporting requirements — what do your facilities need to see?
- ☐ Once confident — local engine becomes backup only (keep it installed, don't schedule)

7.3 The Goal

By end of April: You onboard new facilities directly via the cloud portal. No local engine setup needed for new facilities. You earn xx% revenue share passively. ClaimSync handles the daily operations.

8. Reporting — What We Need From You

We are building a reporting module in the next sprint. To make it useful for you and your clients, we need your input:

Question	Your Answer (to discuss)
What date range do your clients typically ask about?	
Do they want per-facility or per-payer (THIQA/Daman/NAS) breakdown?	
What file types matter most — claims only, or remittance + resubmission too?	
Do they need record counts (RecordCount field) or just file counts?	
Should reports be emailed automatically or downloaded on demand?	
What format — PDF summary, Excel CSV, or both?	
Do clients want to see rejected/resubmitted files separately?	

Your answers will directly shape what gets built. The reporting module is scheduled for April 2026.

9. What's Coming — Your Roadmap

When	Feature	How It Helps You
Apr 2026	Reporting module — per-client, per-facility, date range, CSV	Answer client billing questions instantly
Apr 2026	Facility self-service portal	Your clients log in and see their own files
Q2 2026	Custom domain — ClaimSync.Cloud	Professional URL for your clients
Q2 2026	Per-facility billing + invoicing	Monthly invoice generated automatically
Q2 2026	Shafafiya upload APIs	Submit claims + DRG through ClaimSync too
Q3 2026	Rejection analysis (AI)	See why Shafafiya rejected claims — fix before resubmit
Q3 2026	Smart resubmission suggestions	AI recommends corrections automatically

10. Support & Contact

Your portal	saleem@claimsync.cloud / ClaimSync@Saleem2026
For issues	Contact Anbu — WhatsApp / AnyDesk as always
Anbu login	anbu@kaaryaa.com (Admin portal — full visibility)
API health	https://ca-claimssync-api…/health (no login needed)
Engine schedule	06:00 UAE daily — Azure Container App Job
Pull schedule	07:00 UAE daily — ClaimSyncPull.py on your PC
